

Primary diagnosis for first, subsequent and all outpatient attendances 2007-08

For the 2007-08 financial year, Hospital Episode Statistics (HES) has collected more than 60 million records detailing outpatient appointments delivered by NHS hospitals in England or performed in the independent sector, and commissioned by the English NHS.

Outpatient Hospital Episode Statistics (HES) data was collected for the first time in 2003-04. The NHS Information Centre first released outpatient data at the end of July 2006 and the data was originally released on an 'experimental' basis. Since then, the experimental label has been removed and in 2008 the outpatients published tables were accredited as a National Statistic. This means the data within these specific tables has been produced in accordance with the '*Code of Practice for Official Statistics*'.

The outpatients' data set contains individual records for all outpatient appointments occurring in England such as the type of attendance ie whether it was a first or follow up attendance or the source of referral ie whether or not the outpatient appointment was initiated by the consultant responsible for the outpatient attendance or not.

The latest HES data is available from the *Freely available data* section of the HESonline website [www.hesonline.nhs.uk]. For data breakdowns beyond the scope of the tables available, such as a count of appointments split by strategic health authority (SHA), please contact the HES team via the Contact Centre on 0845 300 6016 or by email at enquiries@ic.nhs.uk.

Please note that in order to avoid undue delay in the publication of these tables, the counts have not been adjusted to account for shortfalls in the number of records received from NHS trusts or for missing/ invalid clinical data (ie diagnosis and operation codes).

Great care must be exercised when comparing HES figures for different years. Fluctuations in the data can occur for a number of reasons, eg organisational changes, reviews of best practice within the medical community, the adoption of new coding schemes and data quality problems that are often year specific. These variations can lead to false assumptions about trends. We advise users of time series data to carefully explore the relevant issues before drawing any conclusions about the reasons for year-on-year changes.

Coverage and data quality

Hospital Episode Statistics (HES) are compiled from data sent by almost 400 NHS trusts and primary care trusts (PCTs) in England. Data is also received from a number of independent sector organisations for activity commissioned by the English NHS. The NHS Information Centre for health and social care liaises closely with these organisations to encourage submission of complete and valid data, and seeks to minimise inaccuracies and the effect of missing and invalid data via HES processes. While this brings about improvement over time, some shortcomings remain.

A Data Quality Dashboard is available on the Connecting for Health website [<http://www.connectingforhealth.nhs.uk/reporting-services/data-quality>]. The Data Quality Dashboard is a national resource to support improvement and completeness of all Commissioning Data Set (CDS) data flows to the Secondary Uses Service (SUS), including the Outpatient CDS. The Dashboard can be used by organisations to review the data they've submitted to SUS and to ensure that the data is comprehensive, compliant with data standards, complete and accurate.

It is not mandatory for providers to code procedures and diagnoses on outpatient records and therefore the coverage is low. The poor coverage may in part be accounted for by the fact that there may be no appropriate OPCS-4 code available, or that the cause of morbidity was unknown. In 2007-08 around 2% of records had a known cause of morbidity and 3% of records had completed or appropriate OPCS-4 codes. However, it is not clear how representative the figures are as we have no reliable existing data source to validate the data against; Department of Health aggregate returns have never collected clinical codes. Please see the Outpatient Data Quality Reports from the *Processing the data* section of the HESonline website [www.hesonline.nhs.uk] for more information about coverage and data quality issues.

Known provider issues

Clatterbridge Centre for Oncology NHS Foundation Trust (REN) and Wrightington, Wigan and Leigh NHS Trust (RRF) were unable to submit complete 2007-08 outpatient data, which may account for shortfalls in the data. Data from these trusts should therefore be interpreted with caution. A data quality flag has been used to highlight this data (in grey shading) in the hospital provider table.

Users of the data who discover apparent anomalies should feel free to contact the HES team, so that they may investigate.

Primary diagnosis

The primary diagnosis, recorded using ICD-10, is the main condition treated or investigated during the outpatient appointment.

- **4 character**

The *Primary diagnosis: 4-character* table provides a complete breakdown of all the 4-character primary diagnosis codes, giving an extremely detailed breakdown. The codes consist of a letter followed by two numbers with a single decimal point (eg A12.3) and are accompanied by a complete description of the diagnosis. The 4-character codes are a direct breakdown of the 3-character codes.

Some clinical information, such as certain diagnoses (eg AIDS) and certain procedures (eg abortions), could potentially be very sensitive if related to an individual patient. While all health information is sensitive, some data items can be more sensitive than others or can more easily enable identification of individuals. To protect patient confidentiality, figures between 1 and 5 (zero to ten, in the case of abortion-related procedures and diagnoses) have been suppressed and replaced with "*" (an asterisk). Where it was possible to identify numbers from the total due to a single suppressed number in a row or column, an additional number (the next smallest) has been suppressed. This is in line with the HES Protocol [www.hesonline.nhs.uk/Ease/servlet/ContentServer?siteID=1937&categoryID=331].

Table column definitions

This section contains descriptions of the column headers found in the freely available outpatient publication tables that can be downloaded from the HESonline website.

Attended first appointment

This provides a count of those who attended their first outpatient appointment.

Attended subsequent appointment

This provides a count of those who attended an outpatient appointment, but it was a follow-up appointment rather than their first appointment.

All (inc. first/subsequent unknown)

This provides a count of all those who attended an outpatient appointment, including first/subsequent unknown, ie whether it was a first or follow-up appointment is not known.

Percentage of all attendances

This provides the all attendances count (see above) as a percentage of the total number of all attendances, including those where it's not known whether they were a first or follow-up attendance.

Primary diagnosis for first, subsequent and all outpatient attendances
